Release Enhancements
GXP OpsView™ v2.1

Ensuring **safety and security** through advanced operational planning and incident response, GXP OpsView™ now includes access to GXP Xplorer® and GXP WebView®!

BAE SYSTEMS

The following provides detail on several of the **key product enhancements** delivered in the GXP OpsView v2.1 release.

1. **Integration with additional GXP capabilities**

   a. GXP Xplorer provides additional data discovery and management capabilities, allowing for easy access to enterprise content, as well as advanced sharing and integration

   b. GXP WebView adds a streaming image viewer with drawing and measurement capabilities, allowing users to publish visual reports of their findings

   c. Incident data appears in GXP Xplorer, providing summary information about the Incident and also allowing the user to 'Open that Incident' directly through GXP OpsView

2. **Group-based access**

   a. Only people in your Group see your location

   b. User administrators see and manage their own Groups

3. **Incident updates**

   a. Incident names appear on each Incident on the map

   b. Clickable Incident footprints allow for easy drill-down into an Incident

   c. Incident File overviews show the full image and include a Close button

4. **Newer and more usable Roles**

   a. Increased control over system access

   b. Secure 'least-privilege' concept in action

5. **Set a default landing page to get to your preferred page faster**

6. **Enhanced icons (smaller and sharper for better visibility)**

7. **Performance enhancements**

   a. Improved rendering

   b. Faster and more reliable Personnel loading

   c. Faster Personnel filtering

Note: Additional enhancements in the most recent release of GXP Xplorer, GXP WebView, and GXP InMotion™ are provided in the enclosed Release Enhancements booklet.
