GXP Xplorer® Platform v2.4.7.1 release details

Presented by Nicholas Rosengarten, GXP™ Product Development

BAE SYSTEMS

GXP Xplorer® v2.4.7.1 updates
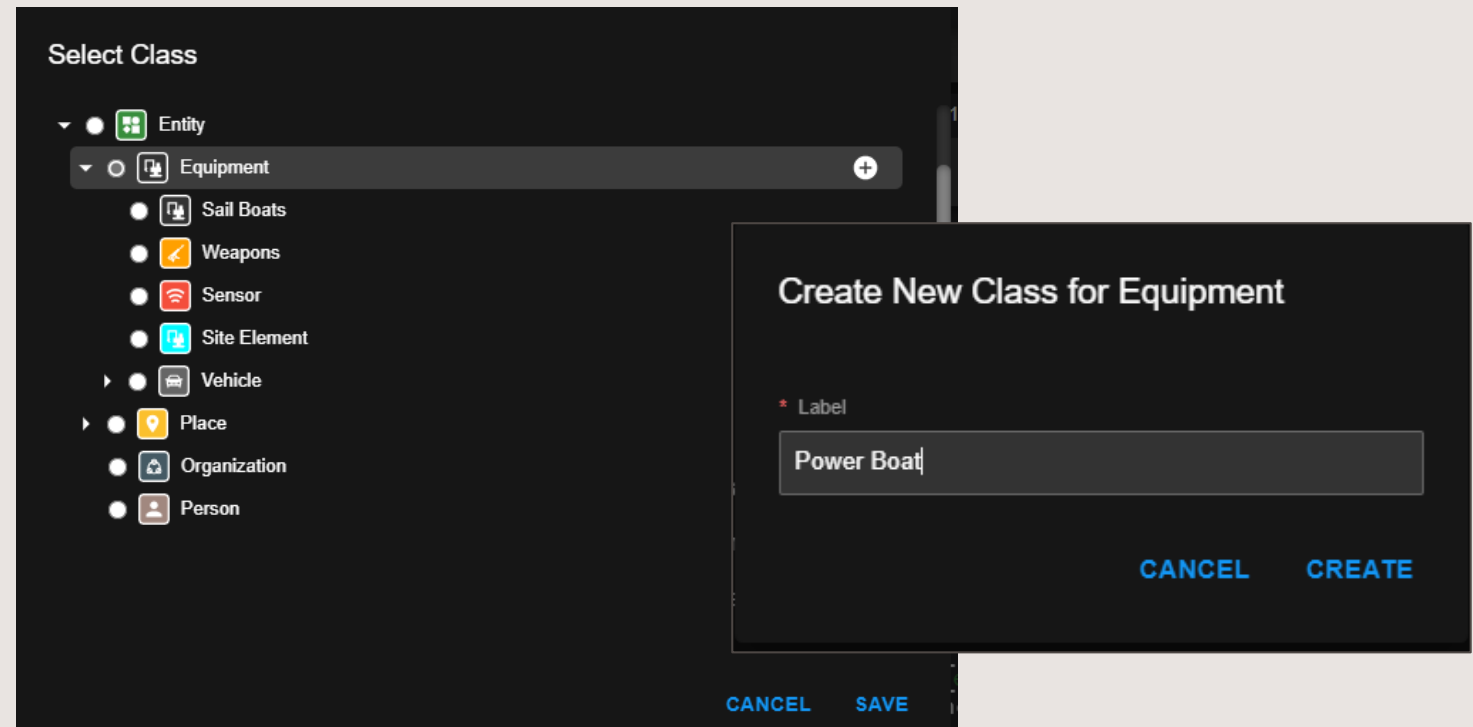

BAE SYSTEMS

Significant enhancements

- GXP Xplorer v2.4.7.1 is compatible with Visual Profiler v6.3.73.0

- Users can now configure ancillary file naming conventions when cataloging MSDI files
  - Done through modifying a configuration file
    - *GXP Xplorer Platform*\components\socetgxp-core-services\Config\Ls]MsdiConfig.xml
    - Regular expressions can be used to associate ancillary files

- A new property has been added to allow users to ignore metadata fields when cataloging data
  - Property is **solr.catalog.exclude.metadataFields** and is located in %GXP_XPLORER_DATA%\config\karaf\etc\com.baesystems.gxp.services.catalog.cfg
  - By default, the FREESA TRE has been set to be ignored as it is often used as a dumping ground for binary data which is unnecessary to catalog and causes some products not to ingest
    - solr.catalog.exclude.metadataFields = TRE_FREESA_TREDATA
  - Any metadata or TREs can be ignored by adding to this list with a comma
    - You must identify the SOLR mappings to be able to add to this list

BAE SYSTEMS

GXP Fusion™ v2.4.7.1 updates

BAE SYSTEMS

GXP Fusion v2.4.7.1 release enhancements

- On-the-fly Data Model additions:
  - Allows the users to make additions to the data model while performing analysis in GXP Fusion
  - Built into the Entity selector in the Observation and Text Analysis widget
  - Utilizes new permissions added for Data Model editing

BAE SYSTEMS

Thank you
